CodoniX Notes – Overview

What is CodoniX?

CodoniX Notes is a complete software charting and coding system designed by practicing physicians to electronically manage hospital Emergency Departments, Urgent Care Facilities and Physician Offices.

- **Nursing Documentation – Live in 2003**
- **Physician Documentation – Live in 2006**
- **Complete Electronic Charting Mechanism from beginning to end**
- **Application is completely web-based**
- **There are two modules: Trackerboard and Previous Lookup**

Trackerboard vs. Previous Lookup

Trackerboard – used by ED to see current patients being treated, i.e. charts that are not yet signed; available via campus intranet only

Previous Lookup – used to see previous patients; available on and off campus via Internet (separate username and password)

Login Information:

- **In the Trackerboard module, only username is required**
- **In the Previous Lookup module, username and password is required**
- **Customer Support provides Login credentials with approval from ED → See Customer Support contact information at conclusion of this guide**
